^aHispanics/Latinos can be of any race.

[&]quot;Includes American Indian/Alaska Native, Asian, Native Hawaiian/Other Pacific Islander, and Multiple races

^cHeterosexual contact with person known to have, or to be at high risk for, HIV infection.

[&]quot;Includes hemophilia, blood transfusion, and persons (169 cases) who were exposed perinatally but were aged >13 at most recent year.

"Persons who have most recent viral load test result <200 copies/ml between 01/01/2016 through 12/31/2016 are considered as HIV viral suppression.

The overall population is overestimated because cases are only followed up for 11 months after 12/31/2016. CDC suggests that every case should be followed up at least 18 months to collect death certificate information.
